THE FIX AND GO STORY

We have dedicated years to developing an ideal design for our fences and gates, utilizing top-quality materials and finishes. Our primary goal is to create a fence that is maintenance-free, durable, and cost-effective. Fix and Go Gate and Garage Door Services Inc has successfully secured both design and utility patents.

POWDER COATING

Powder coating is a finishing process used to apply a protective and decorative layer to metal surfaces. In this process, a dry powder is electrostatically applied to the surface of the metal. The metal is then heated in an oven, which causes the powder to melt and form a smooth, hard coating. This coating is durable, resistant to chipping, scratching, and fading, and provides a high-quality finish that's often used in various industries for items like fences and gates.

PRE-FABRICATED PROFILES

We produce pre-fabricated aluminum profiles suitable for various gate and fence projects. Constructed from 6061 T6 aluminum with a 2mm wall thickness, our profiles offer exceptional durability, strength, and longevity. Additionally, all components are coated with top-quality American-made powder.

ENDLESS DESIGNS

At Fix and Go Gate and Garage Door Services Inc, we are passionate about fencing. It's the first thing visitors notice, and we believe it should be both sturdy and attractive. Our patented system delivers on both fronts. We offer modern, long-lasting fencing and gates that are affordable and easy to install, providing all the benefits our customers expect. Our powder-coated aluminum fencing features a unique horizontal design that is lightweight and highly customizable, offering a wide range of elegant options for full or partial privacy. Made from four different aluminum profiles, our fences come pre-coated and ready to install. You can create over 100 different styles without the need for welding, screws, or special tools, and the design looks identical from both sides.
